## Kids-Fitness Equipment

### **Kids-Fitness Equipment**

In the course of deliberations for expansion, we conceived the idea of producing fun equipment which would encourage children to exercise in a variety of ways and aid their bodies and minds' development without causing any strain or harm.

To take this idea a stage further, the company has established a trading division-"Fitness Toys for Kids". It now produces a wide range of equipment similar to that used by adults with more limbering exercise than strain for muscle development. Now, both parents and child may have fun of exercising together.

The adult should be aware of the danger of allowing or encouraging the child to strive for muscle development at too young an age.

The equipment is very useful for developing agility of the child and providing exercise and mental stimulation to enhance his or her learning ability.
